

3 .Mockito Exercises

Exercise 1: Mocking and Stubbing

Source Code

```
@Test
public void testExternalApi() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    when(mockApi.getData()).thenReturn("Mock Data");
    MyService service = new MyService(mockApi);
    String result = service.fetchData();
    assertEquals("Mock Data", result);
}
```

Output Screenshot

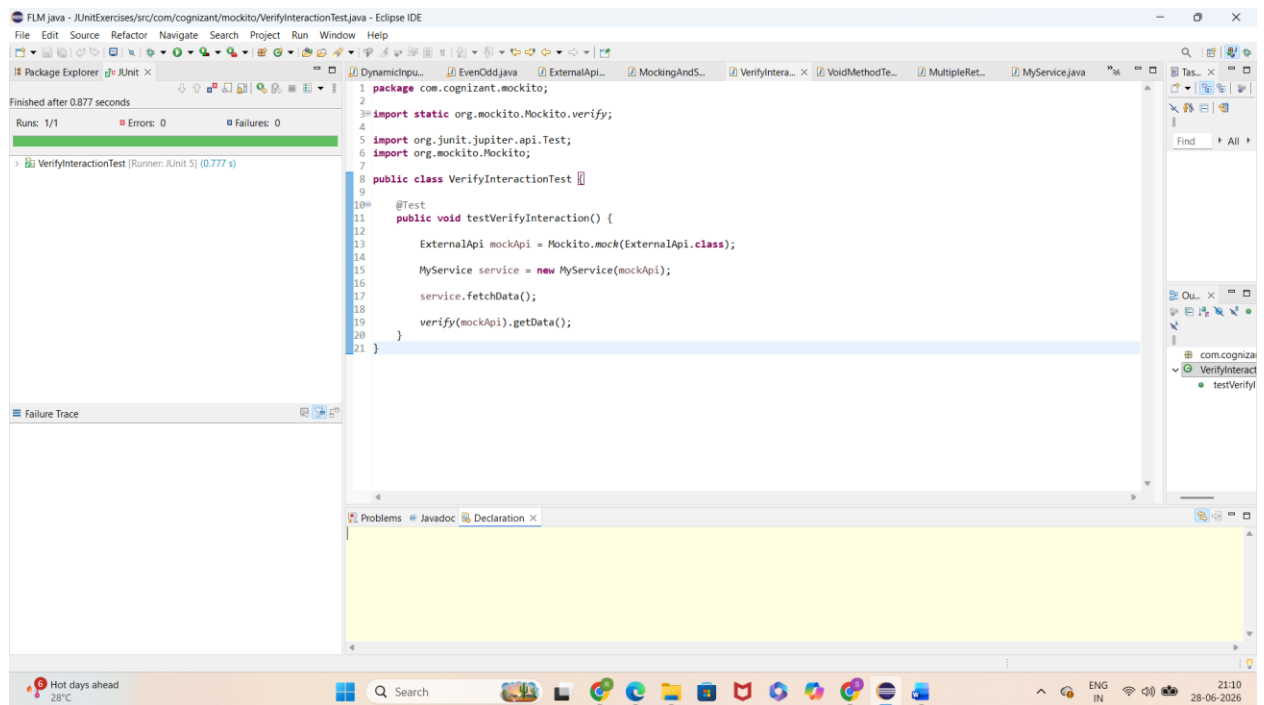

Exercise 2: Verifying Interactions

Source Code

```
@Test
public void testVerifyInteraction() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    MyService service = new MyService(mockApi);
    service.fetchData();
    verify(mockApi).getData();
}
```

Output Screenshot

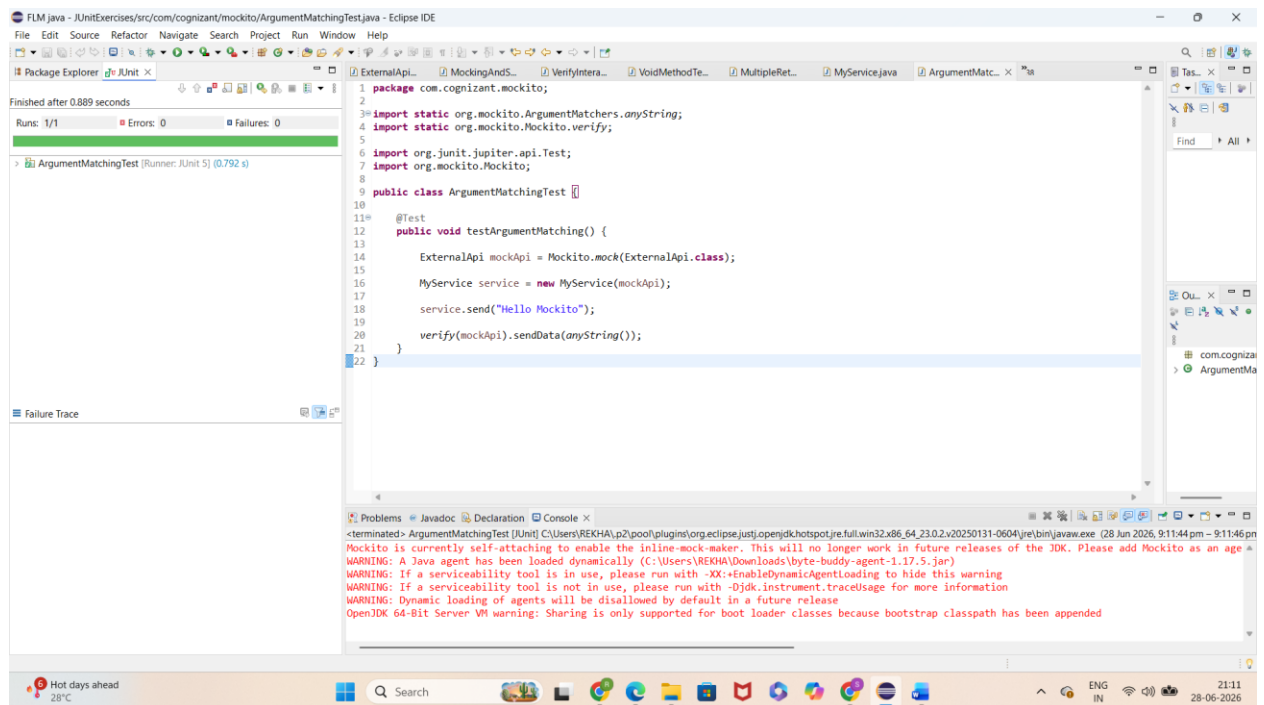

Exercise 3: Argument Matching

Source Code

```
@Test
public void testArgumentMatching() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    MyService service = new MyService(mockApi);
    service.send("Hello Mockito");
    verify(mockApi).sendData(anyString());
}
```

Output Screenshot

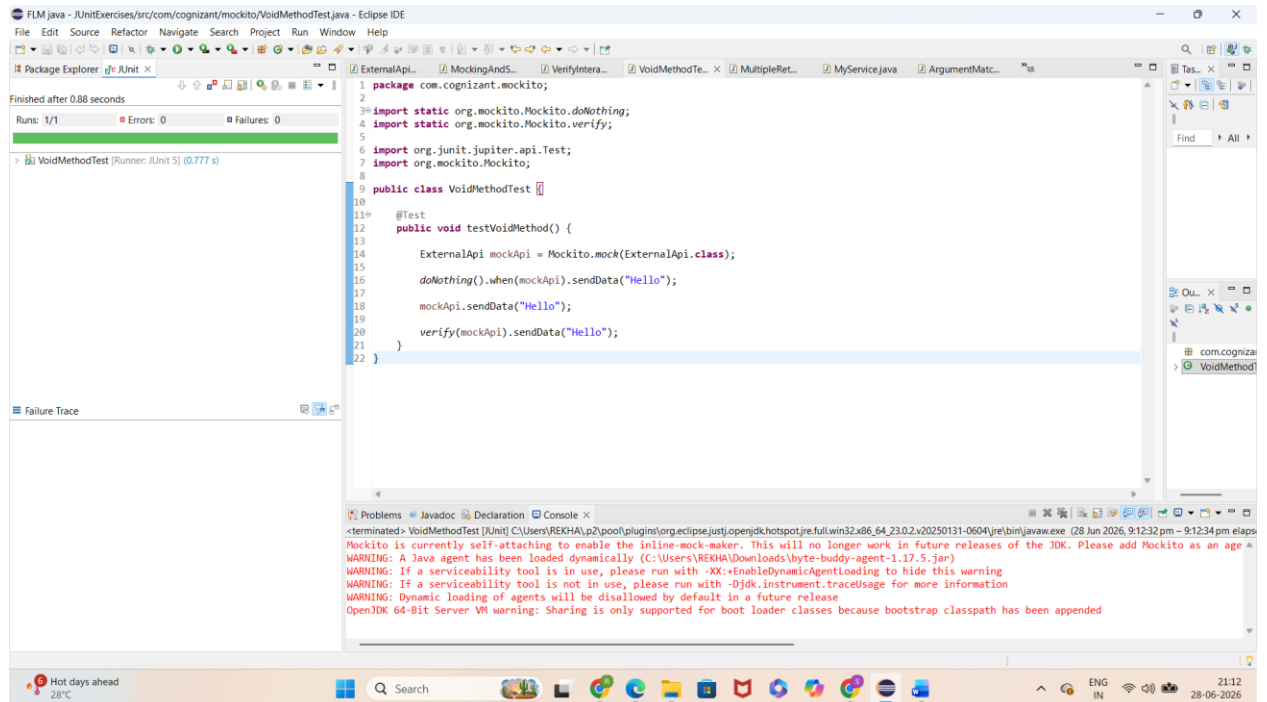

Exercise 4: Handling Void Methods

Source Code

```
@Test
public void testVoidMethod() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    doNothing().when(mockApi).sendData("Hello");
    mockApi.sendData("Hello");
    verify(mockApi).sendData("Hello");
}
```

Output Screenshot

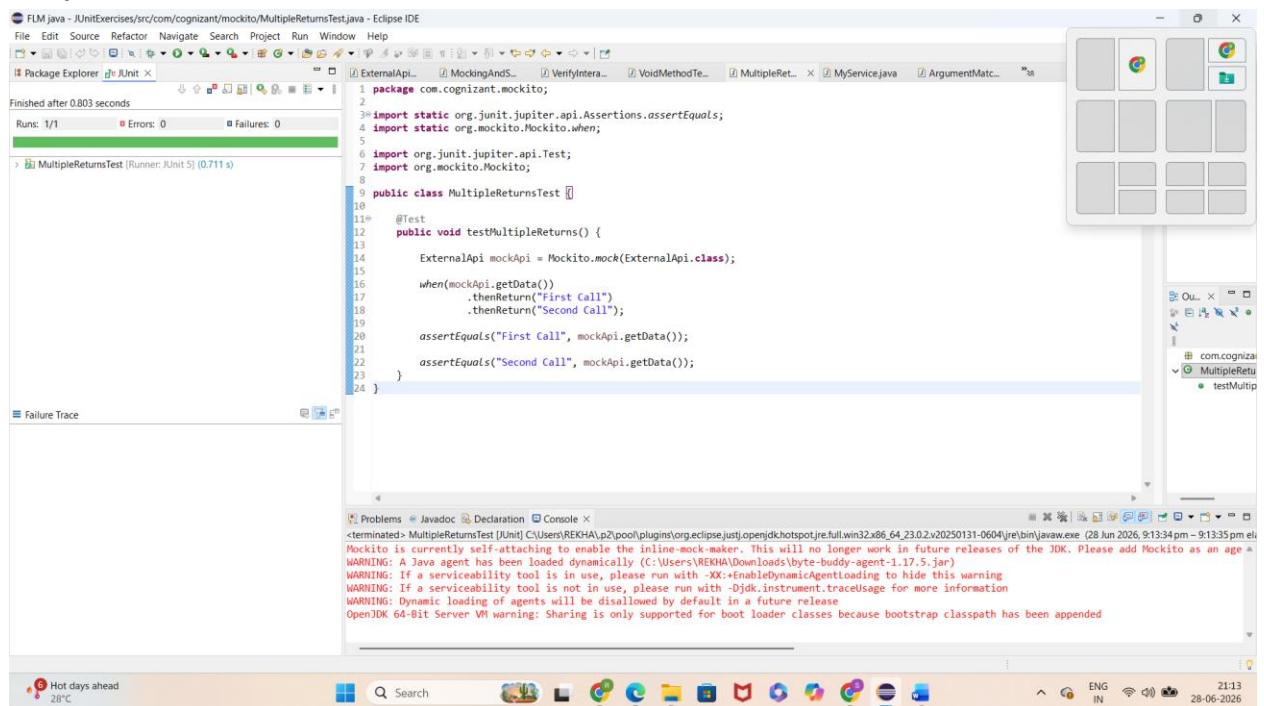

Exercise 5: Multiple Returns

Source Code

```
@Test
public void testMultipleReturns() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    when(mockApi.getData())
        .thenReturn("First Call")
        .thenReturn("Second Call");
    assertEquals("First Call", mockApi.getData());
    assertEquals("Second Call", mockApi.getData());
}
```

Output Screenshot

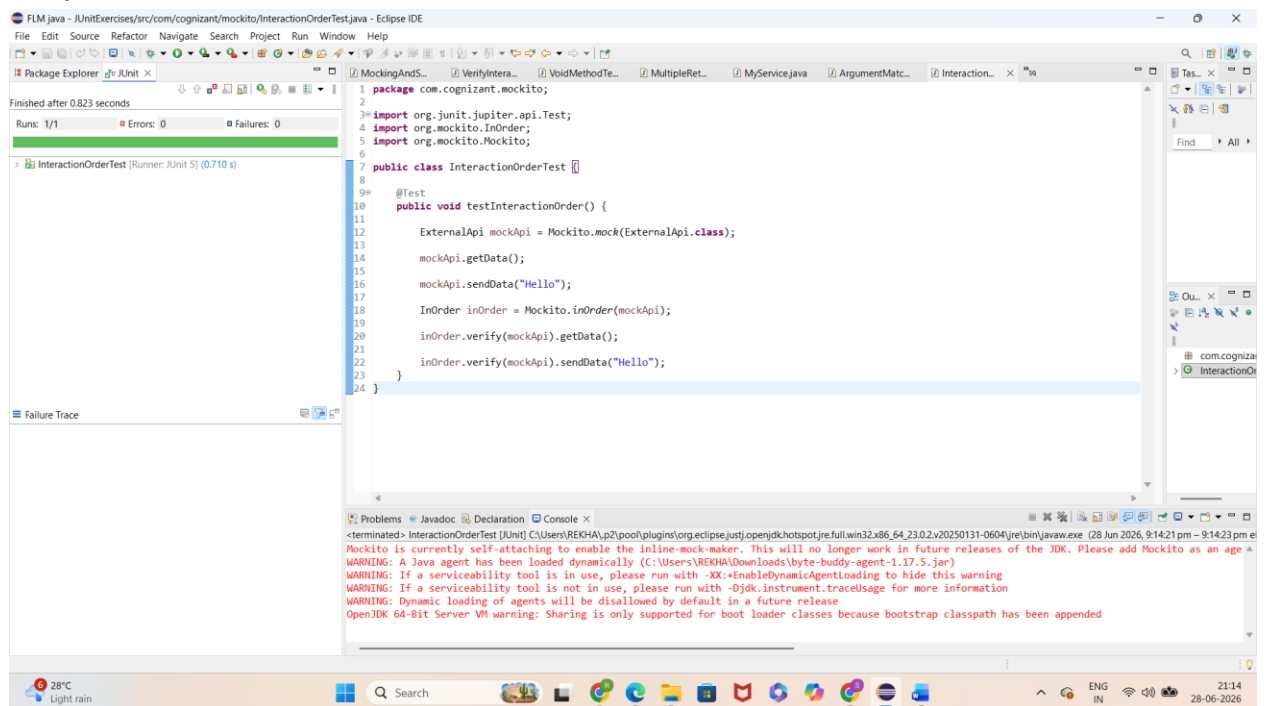

Exercise 6: Verifying Interaction Order

Source Code

```
@Test
public void testInteractionOrder() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    mockApi.getData();
    mockApi.sendData("Hello");
    InOrder inOrder = Mockito.inOrder(mockApi);
    inOrder.verify(mockApi).getData();
    inOrder.verify(mockApi).sendData("Hello");
}
```

Output Screenshot

Exercise 7: Void Method with Exception

Source Code

```
@Test
public void testVoidMethodException() {
    ExternalApi mockApi = Mockito.mock(ExternalApi.class);
    doThrow(new RuntimeException("Error"))
        .when(mockApi).sendData("Fail");
    assertThrows(RuntimeException.class, () -> {
        mockApi.sendData("Fail");
    });
}
```

Output Screenshot
